SUMMARY

Dedicated cybersecurity enthusiast with hands-on experience in VAPT, security tool development, end point monitoring with proven contributions to open-source security projects.

WORK EXPERIENCE

Nexavise Consulting Pvt Ltd OCT 2025- JAN 2026

VAPT Intern

- Performed Vulnerability Assessment and Penetration Testing (VAPT) on web applications.
- Discovered and reported vulnerabilities in client websites like weak cryptography, IDOR, Broken Access Control etc.
- Prepared detailed security assessment reports with remediation guidelines.

PROJECTS

- **OpenSource Contributions-**
  Metasploit Framework:
  - Refactored Windows exec payload CMD handling into a reusable shared mixin to reduce duplicated logic and improve maintainability across payload implementations. Issue: **#21365** PR: **#21460**
  - Added CVE-2026-46333 Linux post-exploitation support and unified hash reporting via a shared mixin. Issue: **#21471** PR: **#21472**
  - Added exploit module for CVE-2026-0770. Issue: **#21712** PR: **#21750**

  zeek: Added a built-in function get_plugin_components to list the tags available for a component and return them as a vector of records and done btest testing for the same. Issue: **#4221** [PR: **#4543 #4604 #4606**]
- **PedolOne-** Built a consent-first fintech data-sharing platform that allows users and organizations to securely exchange sensitive financial data through end-to-end encryption, granular consent management, tamper-evident audit logs, HMAC-based integrity verification, and real-time security monitoring for unauthorized access and suspicious login activity.
- **OS3-** Built OS³ (Open-Source Security Score), a supply-chain security platform that evaluates open-source dependencies across PyPI, npm, and Maven using composite risk scoring, CVE intelligence, maintainer activity, provenance analysis, and typosquatting detection, providing real-time risk assessment and actionable remediation through a VS Code extension and CLI.
- **ADShield-** AD security assessment platform for misconfigurations, privilege escalation, stale objects, baseline deviations, and threat analytics. Useed MITRE-mapping to map out risks.
- **UniThreat-** UniThreat is a web dashboard that lets security analysts and researchers look up IPs, URLs, and file hashes using AbuseIPDB, URLhaus, and VirusTotal APIs, with login authentication, search history tracking, and result visualizations.

EDUCATION

INTEGRATED BTECH MTECH CSE CYBERSECURITY - NATIONAL FORENSIC SCIENCES UNIVERSITY	PPI-9.20	2022-2027
KENDRIYA VIDYALAYA BARRACKPORE AIR FORCE STATION	10th - 94.8% & 12th - 91.8%	2010-2022

CERTIFICATES

- Digital Personal Data Protection Act Certificate Course
- Jr Penetration Tester Pathway(Try Hack Me)
- DevSecOps Pathway(TryHackMe)

SKILLS

Language: C, C++, Python
Tools: Snort, Splunk, Docker, Burpsuite, Wireshark, Ghidra, Metasploit, Autopsy, MITRE ATT&CK
AWS Operations: S3, EC2, IAM, VPC, WAF
Cybersecurity Operations: Threat Intelligence(STIX/TAXII), Malware Analysis, VAPT, SIEM

ACHIEVEMENTS

- Winner at Adani OT Cybersecurity Hackathon, 2026
- Winner INNOVAI Hackathon (IBM x NFSU)
- CDAC BOSS Bug Bounty 1st Runner Up West Zone
